

LEED® v4.1 and SolarWall® Technology

Energy and Atmosphere (23/33)

Optimize Energy Performance (18)

By reducing the energy consumption of the facility and offsetting greenhouse gas emissions, SolarWall systems will contribute toward the 18 points available in this category

Renewable Energy (5)

SolarWall systems are an on-site renewable energy technology and will contribute toward the 5 points available in this category

Materials and Resources (4/13)

Environmental Product Declarations (2)

SolarWall systems contain steel components with Industry-wide Type III EPDs conforming to ISO 14025 and will contribute toward the 2 points available in this category

Sourcing of Raw Materials (2)

SolarWall systems meet recycled content criteria and will contribute toward the 2 points available in this category

Indoor Environmental Quality (2/16)

Enhanced Indoor Air Strategies (2)

SolarWall systems can allow for increased ventilation rates without additional energy consumption and will contribute toward the 2 points available in this category
